ARTURO PULIDO

AI Automation Engineer | LLM Agents, n8n & Full-Stack Development

+52 333 952 1301 • arturopo97@icloud.com • linkedin.com/in/arturopo • github.com/p0sin • Guadalajara, MX

SUMMARY

- AI Engineer with 2+ years designing AI solutions for different kinds of businesses, owning the full cycle: gathering and structuring client information, analyzing the options and designing the AI solution that best fits each client.
- Experienced in designing agents end to end: cost estimation, prompt and tool design, structured outputs, testing, output evaluation and safeguards, with escalation to a human where reliability matters.
- Hands-on with LLMs, function calling, RAG-style knowledge layers, n8n, webhooks and API integrations.

EXPERIENCE

Software Developer | AI Automation & Full-Stack — SENSO MX

Jun 2024 – Present | Jalisco, MX (Remote)

ElevarIA — Multi-Agent LLM System for Social Media Content

- Designed a production multi-agent LLM system of 9 specialized agents (planner, writer, LLM-as-a-judge validator and reviewer, auto-correction, variations, web-search research, insight extraction) that generates and reviews social media content for agency clients, defining agent roles, structured outputs, quality criteria and human-in-the-loop review.
- Designed hybrid quality gates for LLM output: deterministic checks run before an LLM judge that returns per-criterion verdicts, with code (not the model) deciding approve / request changes / reject, and failures fed back to the writer for self-correction.
- Integrated it into the product: real-time per-post generation progress over WebSockets (Django Channels + React) and AI review interfaces (correction diff viewer, A/B variations, teleprompter).

SofIA — WhatsApp AI Agent for a Healthcare Practice

- Deployed a production WhatsApp AI agent with a RAG-style knowledge layer, strict JSON output contracts and escalation to a human team member.
- Implemented tool use / function calling for lead qualification, scheduling and payment verification; integrated Kommo CRM, Google Calendar and Supabase/PostgreSQL via REST APIs and webhooks (n8n).

Multi-Agent Repository Maintenance Pipeline

- Built a multi-agent pipeline (triage, updater, auditor, notifier) maintaining 20+ production repos end to end on a 15-day cycle; each change is validated twice: build before deploy, live site after release.

TECHNICAL SKILLS

AI / LLMs: LLMs (GPT-4, Claude, Grok), prompt engineering, RAG, function calling / tool use, structured JSON outputs, LangChain, LangGraph, CrewAI.

Automation & APIs: n8n, REST APIs, webhooks, WhatsApp Business API, Kommo CRM, Google Calendar API, Facebook Graph API.

Programming: Python, JavaScript, SQL, Node.js; Django, Django REST Framework, Celery, Redis, React.

Data & Tools: PostgreSQL, Supabase, Git/GitHub, Docker, AWS, unit testing; AI coding tools and agentic workflows (Cursor).

EDUCATION & TRAINING

B.E. Civil Engineering — *ITESO, Guadalajara MX | Aug 2016 – Dec 2021*

AI Training — *LLM Engineering · Complete Agentic AI Engineering · Generative and Agentic AI in Production (Udemy)*

LANGUAGES

- English — Native / Professional · Spanish — Native
